

BRUSSELS AND BEIJING: APPROACHES TO AVIATION EMISSIONS

IN A WARMING WORLD

WHAT'S YOUR IMPACT?

Calculate Flight Emissions

Calculate your flight's CO₂ footprint and offsetting costs in renewable energy projects. We accept all common means of payment. You will receive a personal certificate and a donation receipt (valid for German tax authorities only) from atmosfair. Your climate contribution is tax deductible (Germany only).

IMAGES SOURCED FROM WWF

INTERNATIONAL CIVIL AVIATION ORGANISATION (ICAO)

- A global deal to offset emissions above 2020 levels
- What are offsets and what do you think of them?

CHINA, THE EU AND THE U.S.

ROLE OF CHINA

- Growing aviation emissions (will double by 2030)
- Action outlined in its national five-year plan, including emission trading system
- What role did China play at ICAO, and how can Chinese NGOs engage?

ROLE OF EUROPE

- **Transport** the largest contributor of EU carbon emissions, **16%** of which comes from **aviation**
- Aviation will grow by **80%** by 2030
- EU has included intra-EU aviation under its emission trading scheme, while leaving the international flights out for now (until Jan 1st, 2017)

DURING OUR EXCHANGE ...

- Briefings
- Cross-sectoral dialogue to engage various stakeholders
- Strategic communications
- Face-to-face interviews with key stakeholders

INSIGHTS & OBSERVATIONS

HOW TO ENGAGE OTHERS?

Institutional level:

How could NGOs influence policy-makers?

How could NGOs influence individuals?

FUTURE COOPERATION

- Coordinating global action to address aviation emissions at domestic, regional and international level
- Capacity building for those following ICAO
- Share experience on aviation in ETS
- Joint media briefing/offline roundtables around key moments
